

ASSIGNMENT 1B: ASSUMPTIONS

1. As a driver may be approved to drive many trucks (and vice versa), a driver-truck combination would make zero or many collections. For example:
 - John is approved to drive Trucks A, B, and C. For a particular collection instance/date (e.g. 2nd April 2023), John may drive Truck A and B on that date but may not drive Truck C.
2. Different authorities may have different waste collection frequencies for waste of the same types. For example:
 - Authority A is larger than Authority B; hence, for green waste, Authority A may require a more frequent green waste collection (weekly) compared to Authority B (fortnightly).
